

Welcome to the Wiring Diagram CD for all Lexus Soarer Models to 1999 JZZ3#, UZZ3#. We hope you like it and that you can save money and time by using it.

As a courtesy we have included a "How to Use" document. This is copied from the USA Supra wiring diagram. It's pretty close to the Soarer and we thought it may help.

To find a "Knock Sensor #1", for example, open up "Main Document" and press **Control F** (on the keyboard) type in knock and press enter. It will find the first occurrence of Knock and it's also what you are looking for.

It says the plug number is C57 and you will find it on page 2-3 and 2-6.

Go to 2-3, is your motor a 1JZ (TT)? If not go to 2-6.

To see if there are any notes associated with plug C57 go to the Japanese Index page 2-2(see top right of the page for the page number). Look up plug C57 and you will not see any notes. But look up a bit at plug C50... see, it says there were some changes. THAT explains why some plugs are on a diagram more than once and look different.... It's a production change for whatever reason.
